Luisina Müller

Junior Software Developer | React · Node.js · SQL

Santo Tomé, Santa Fe, Argentina · +54 9 342 445-7612 · luisina.e.muller@gmail.com
Portfolio: luisina-muller.vercel.app · linkedin.com/in/luisina-muller · github.com/luisimuller

PROFESSIONAL SUMMARY

Junior Software Developer about to complete an Advanced Technical Degree in Software Development, with hands-on experience in web application development and the use of various technologies and tools. In my projects I have worked with technologies such as React, Node.js, Express and SQL, among others, and applied version control and collaborative practices, such as using Git, branches and pull requests.

My 4+ years of experience in industrial automation engineering allowed me to develop a strong ability to analyze problems, understand existing systems, reverse-engineer code and troubleshoot production environments. I also have experience coordinating with different departments and communicating with clients and international teams.

I am currently seeking my first professional opportunity in software development, where I can contribute my technical experience, take part in real projects and keep growing within a development team.

TECHNICAL SKILLS

Programming languages: JavaScript, Python, C#/.NET, Kotlin, SQL; SCL (Structured Text), Ladder and STL (industrial automation).

Frontend: React, React Router, Vite, HTML, CSS, Bootstrap 5, responsive design, SPAs, Leaflet.

Backend: Node.js, Express, REST APIs, MVC architecture, role-based authentication and authorization, bcrypt, TCP sockets.

Databases & ORM: PostgreSQL, SQLite, MongoDB, Prisma ORM, Mongoose.

Tools: Git, GitHub (branches and pull requests), Postman, ESLint, Vercel, VS Code, Visual Studio, Claude (coding, debugging and documentation assistance).

Methodologies & practices: Agile methodologies, iterative delivery, team collaboration and version control.

Analysis & problem solving: Requirements gathering, technical documentation, reverse engineering of existing systems, production troubleshooting and user training.

PROJECTS

De Obra en Obra — Geolocated marketplace (in progress)

React · Vite · Leaflet · Node.js · Express · Prisma · SQL · 2026 · github.com/luisimuller/de-obra-en-obra-app

- Building a full-stack marketplace to list and find leftover construction materials through an interactive Leaflet map, organized as a monorepo with separate frontend and backend.
- Designed a geolocated matching engine in SQL that compares new listings against users' saved searches and triggers automatic alerts.
- Modeled the data layer with Prisma ORM, using raw SQL queries to handle the spatial logic.

LogiFlow — Logistics management REST API

Node.js · Express · MongoDB · bcrypt · Postman · 2025 · github.com/luisimuller/LogiFlow-CRUD-Backend

- Team-built REST API managing five business entities (customers, vehicles, drivers, shipments and invoices) with full CRUD operations and a layered MVC architecture.
- Implemented role-based access control for three user profiles using authorization middleware, MongoDB-persisted sessions and bcrypt password hashing.
- Documented and tested 32 endpoints in Postman across three iterative deliveries, and wrote the technical README.

NextHire Devs — Team profiles SPA

React · React Router · Vite · REST API (fetch) · Vercel · 2025 · github.com/luisimuller/grupito-1-entregaTP3 · *Demo:* grupito-1-entrega-tp-3.vercel.app

- Co-developed a SPA in a five-person team, with React Router navigation, reusable components, JSON-driven content and consumption of an external REST API.

- Built my own profile section as an independent view with React components and responsive styles, merging changes into the shared codebase with Git.

Club Vanguardista — Member management app (Android)
Kotlin · Android Studio · SQLite · 2025 · github.com/nicochiove/dispoMoviles

- In a three-person team, developed the home, member search and payments screens, the four-table local SQLite database and login validation.
- Integrated work through branches and pull requests.

WORK EXPERIENCE

Automation Lead — Gloria Argentina S.A. **2024 – Present**
Esperanza, Santa Fe, Argentina

- Lead the automation area of a dairy production plant.
- Built from scratch a supervisory system (HMI) for water tanks and pumps, with levels, statuses, alarms and historical trends.
- Automated a previously manual wastewater treatment plant, programming its control logic and supervisory interface.
- Integrated a new module into a production SCADA system, reverse-engineering its standards to comply with its ISA-88 modular architecture.
- Coordinate with production, maintenance, quality and external vendors; present technical and cost proposals to management.

Automation Technician — SG Project srl (Italy) **2021 – 2024**
Client plants in Brazil, Mexico and Italy

- Commissioned palletizers and end-of-line systems at client plants in Brazil, Mexico and Italy.
- Programmed and tuned control systems to each site's requirements, and troubleshot on-site issues with production running.
- Worked directly with clients in Spanish, English and Italian, and trained operators on the installed systems.

EDUCATION

Advanced Technical Degree in Software Development (Tecnicatura Superior) — IFTS N°29 · 2024 – Dec 2026 (expected)

Bioengineering — Universidad Nacional de Entre Ríos · 2009 – 2018

Web Development and Web Development with React — Universidad Tecnológica Nacional (UTN) · 2023

Professional Ontological Coach — ECOA · 2018 – 2020

LANGUAGES

Spanish: native · English: intermediate · Italian: basic
